

## PumpFloater P 601 - P 801, PS 1000 - PS 1500

PumpFloater\_P601-P801\_PS1000-PS1500.2014/11.Eng

### General

PUMPEX PumpFloater is an easy, inexpensive, way to safeguard trouble-free operation of a pump in muddy sumps and in sumps with “soft” bottom conditions, at the same time prolonging the pumps service life by reducing the pumps internal wear.

The PumpFloater keeps the pump at the surface, independent of variations in water level, to avoid the pump from digging itself into the mud and sand at the bottom of the sump.

Suspending the pump from the bottom of the sump prevent problems such as clogging of the strainer, excess wear of impeller, diffuser and wear plate etc.

PUMPEX PumpFloater is available for drainage pumps P 601 - P 801 and PS 1000 - PS 1500.

### Application

It is fast and easy to install a PUMPEX drainage pump into the light weight PumpFloater. Simply put the pump in the ring and tighten the strap, no tools is required.

### Materials

Floater block: Oil resistant polyethylene filled with expanding polystyrene

Strainer: Hot dipped galvanised steel

Technical data		
P/N	Description	Weight up to
359043	PumpFloater P 601 - 801	25 kg (for P 601-801)
363195	PumpFloater PS 1000 - 1500	45 kg (for PS 1000 - PS 1500)

Dimension				
P/N	Outer Ø (A)	Inner Ø (B)	Height (C)	Height (D)
359043	550 mm	250 mm	308 mm	200 mm
363195	820 mm	400 mm	380 mm	218 mm
